51,500 Square Feet
- Building Systems
Tilt-Up Concrete
Structural Steel Roof Framing
- Building Features
21,000 SF Hi-Bay Warehouse
30,500 SF Administrative Office Area

Project Highlights

R.R. Simmons provided full Design/Build services for Peek Traffic, a worldwide supplier of advanced traffic products, traffic management and safety systems. Peek Traffic has a unique variety of transportation products with worldwide expertise providing the most innovative technologies and cost effective solutions for today's transportation issues. These solutions include digital camera enforcement systems, a full line of traffic control equipment, controllers and cabinets, signal heads, loop detectors and VideoTracks.

Facing the need to consolidate and expand their US operations, Peek Traffic conducted a multi-city search for a new headquarters location. It became clear that Manatee County was centrally located to handle their needs. The new US Headquarters facility had to be functional, but also exhibit professionalism to their international clients. The two story facility houses engineering, manufacturing, training and product demonstration. The manufacturing environment is fully climate controlled and is centered around traditional bench style assembly.
